

Hello. Thank you for your purchase.

For having Subscribers and Lower Thirds in Final Cut Pro:

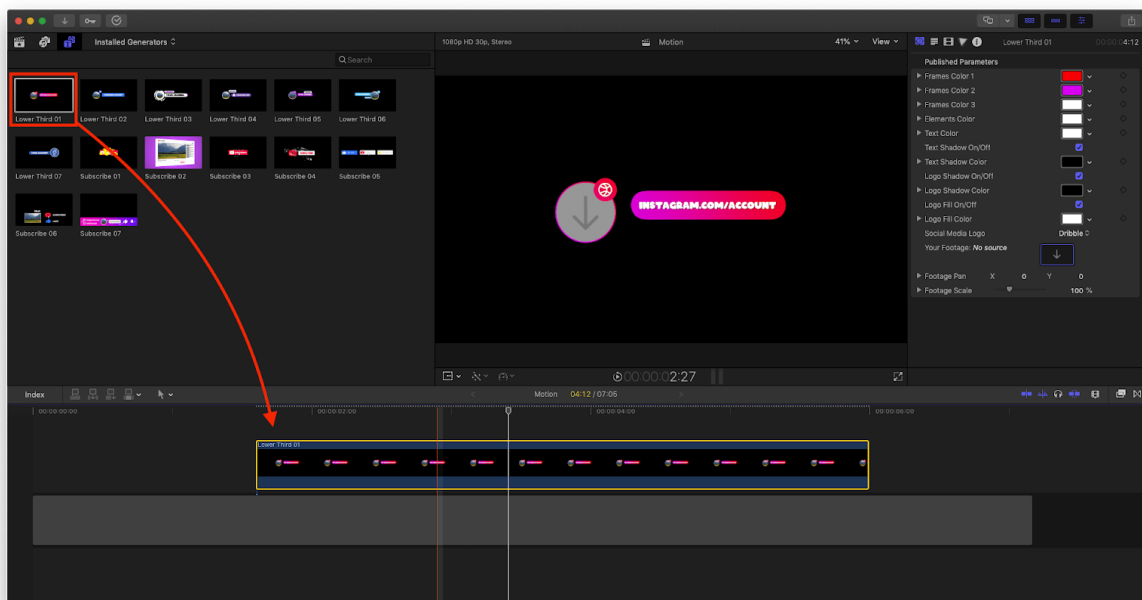

1 If you have Motion installed on your Mac, copy Subscribers and Lower Thirds Folder to:
/Movies/Motion Templates/Generators

2 If you do not have Motion installed on your Mac, copy Subscribers and Lower Thirds Folder to:
Applications/Generators Pro/Contents/Plugins/Media Providers/Motion Effects.fcp/
Contents/Resources/Templates/Generators

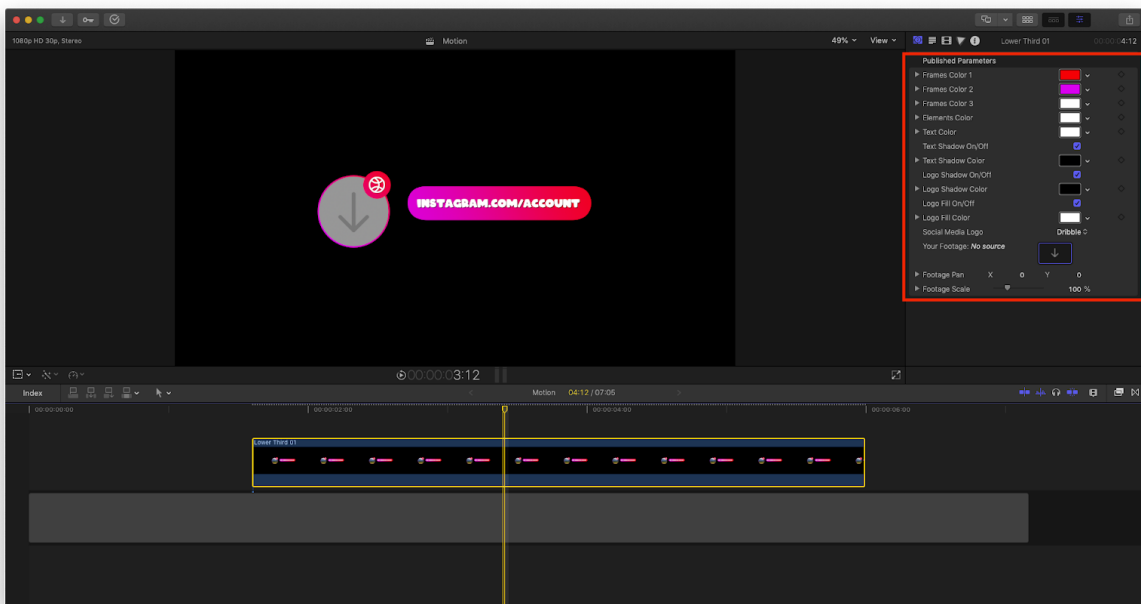

Relaunch the Final Cut Pro to see the Effects

The folder with Subscribers and Lower Thirds will appear in the Generators library

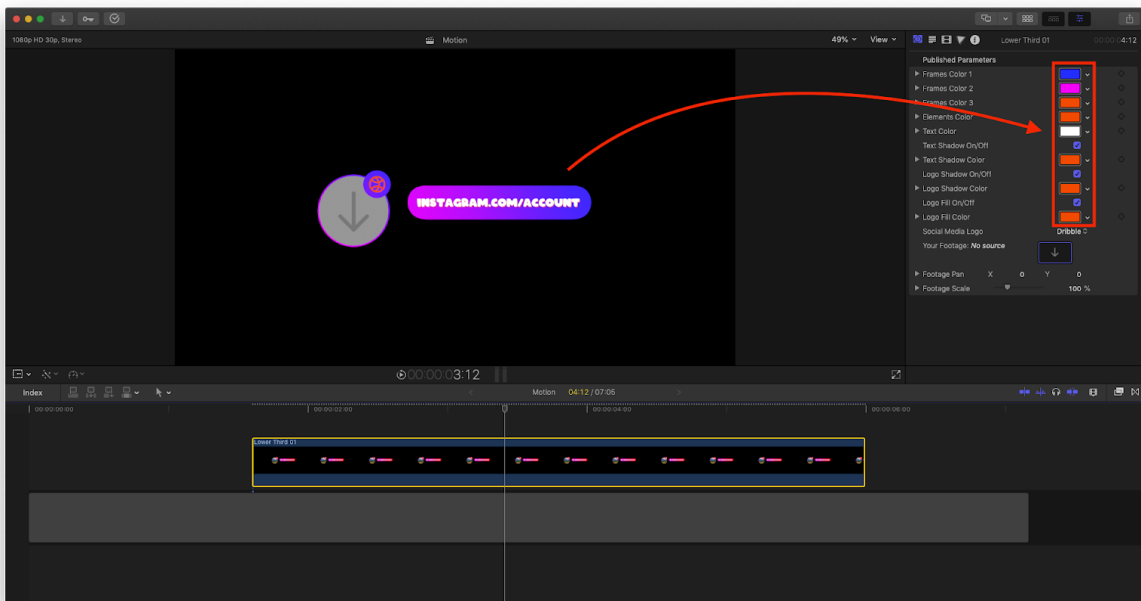

Drag item from Generators library Panel to a timeline

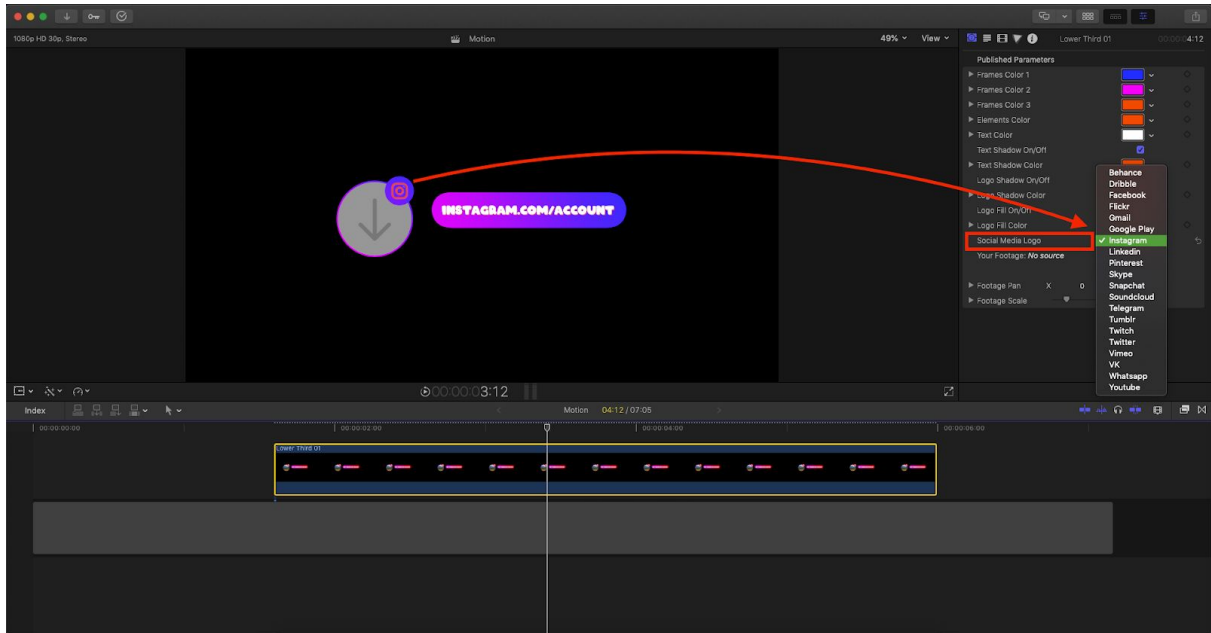

To adjust item use "Published Parameters" panel

Customize colors:

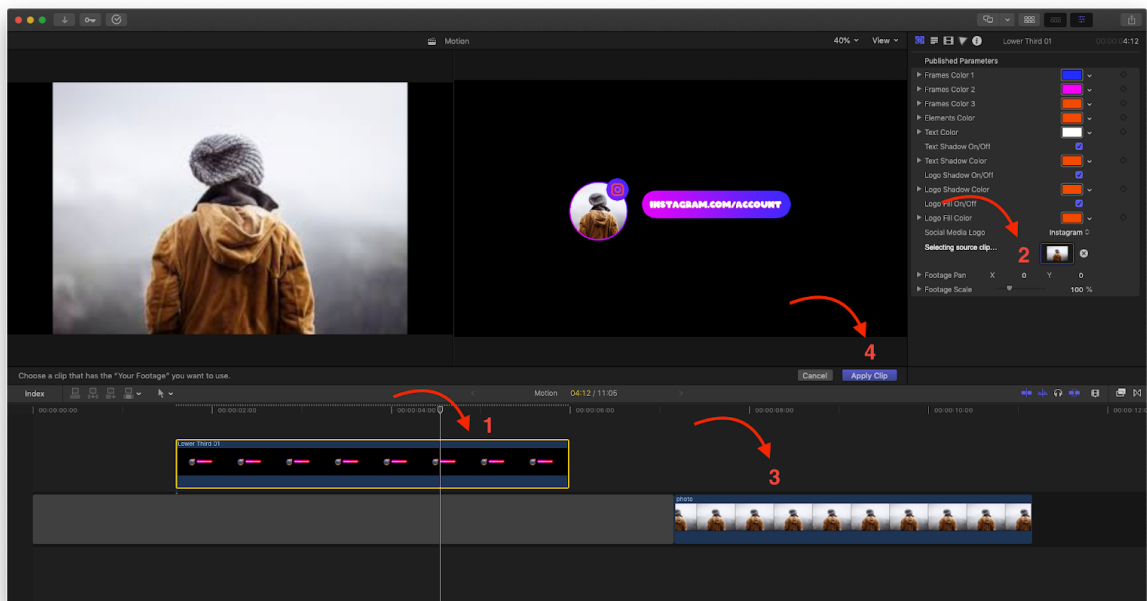

Select “Social Media Logo” type from drop-down menu

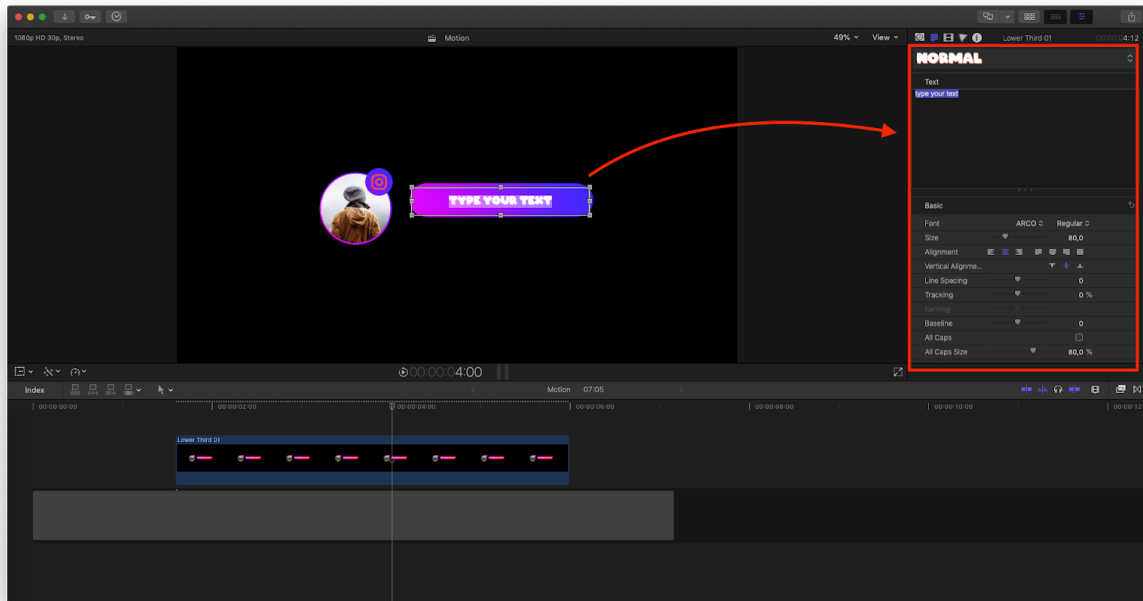

Import your photo to timeline. Select “Your Footage” in Published Parameters and select your photo or video. Your image will appear in the project.

Click “Apply Clip”.

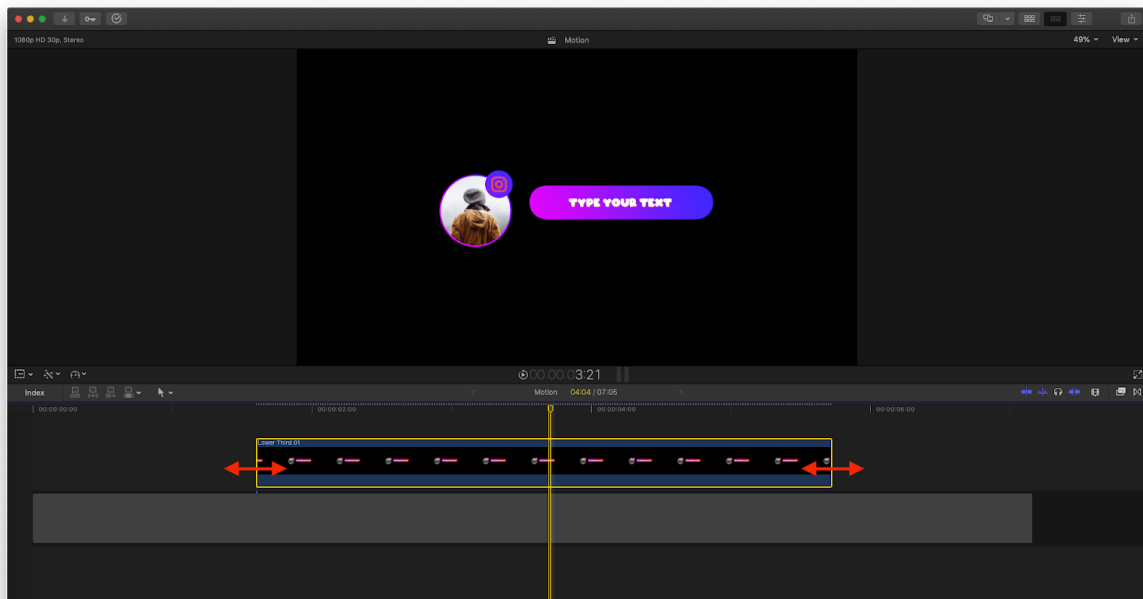

You can set Your Footage Scale and Position, if you need.

Double click to the text and type your text. Adjust text in the "Text Inspector" panel.

If you need to increase or decrease the item time, you just need to pull the right edge of the layer. Right to increase time, left to decrease. In this case, the input and output animation will not accelerate or slow down, only the static part of the item will change.

That's all
Best regards
